Nutrivit-C 95%

Vitamin C (Ascorbic Acid) in Poultry Nutrition:

Although birds can synthesize vitamin C in their liver, But supplementation is important—especially during periods of stress or under challenging environmental conditions. As a water-soluble antioxidant, it plays a vital role in supporting health, immunity, and overall performance.

Composition

Each 1 kg Contains:

Vitamin C (Ascorbic acid Coated)95%

✓ Functions of Vitamin C in Poultry:

Antioxidant Effect – Neutralizes free radicals and supports other antioxidants like vitamin E.

Stress Reduction – Helps birds cope with heat stress, overcrowding, disease, and transport stress.

Boosts Immunity – Enhances resistance to infections and improves vaccine response.

Supports Growth – Improves feed efficiency, body weight gain, and livability in broilers.

Improves Egg Production & Shell Quality – Particularly useful in layers during peak production and summer stress.

Aids in Iron Absorption – Helps in hemoglobin formation and oxygen transport.

✗ When to Supplement Vitamin C:

- Heat stress (especially in summer).
- High-density farming.
- During vaccination or disease outbreaks.
- Transport or handling stress.
- During recovery from illness.

▲ Vitamin C Deficiency Signs (rare):

- Poor immune response.
- Delayed growth.
- Reduced egg quality.
- Increased stress sensitivity.

■ Supplement Forms:

- Ascorbic acid powder (water-soluble).
- Coated vitamin C for feed stability.
- Premixed multivitamin products.
